

Heads up.

When it's a stroke,
minutes matter.

Huge strides in medical science make stroke more treatable than ever. But studies show that only 3 percent of stroke victims seek help in time to minimize stroke damage.

At EIRMC, we know what to do in the case of stroke. With time on our side, we can find and "melt" the blood clot before brain tissue is irreparably damaged.

Knowing these five warning signs – and acting fast – could save your life:

- Sudden numbness or weakness of the face, arm or leg, especially on one side of the body
- Sudden confusion, trouble speaking or understanding
- Sudden trouble seeing with one or both eyes
- Sudden trouble walking, dizziness, loss of balance or coordination
- Sudden severe headache with no known cause

If you have any of these symptoms, don't wait. Dial 911 fast and get help.

When it comes to your brain, the smart choice is EIRMC.
