What You Need To Know

How to prepare for your test:

No special preparations.

How long will the test take?

About 1 hour.

What is the purpose of the test?

To look for causes of testicular pain or masses felt by the patient or doctor.

How is the test performed?

A gel will be applied to your scrotum to provide better contact with the transducer (handheld probe). The transducer will be placed on the skin surface and moved over the scrotum to produce images of the testicles.

Required before test:

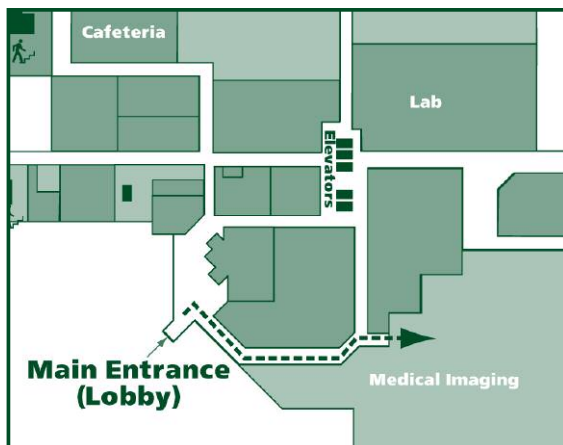

Please provide a signed physician order to perform the exam.

Results will be sent to your ordering physician after a radiologist's review.

Your test will be conducted at:

EIRMC (main campus)

Medical Imaging Department
3100 Channing Way
Idaho Falls
208-227-2600

What is ultrasound?

Your doctor has ordered for you a body imaging test known as an ultrasound. Ultrasound is like ordinary sound except it has a frequency (or pitch) higher than human beings can hear. No radiation is involved. When sent into the body via a transducer (small, handheld probe) resting on a patient's skin, the sound is reflected off internal structures. The returning echoes are received by the transducer and converted into pictures of the internal structures on a viewing screen. Diagnostic ultrasound imaging is commonly called sonography or ultrasonography.
